WORKSHOP

YouTube

The GLOBAL ETHICS

„...is an inclusive approach to common binding values, guiding principles, personal attitudes and common action across cultures, religions, political and economic systems and ideologies.“

- Globalethics.net,
Global Ethics 4.0 – Chapter 3. Ethics in the information society: the nine P's

„Without a basic consensus over ethics any society is threatened sooner or later by chaos or a dictatorship. Therefore, there can be no sustainable world order without a GLOBAL ETHIC.“

- Peter Schier,
Konrad Adenauer Foundation

Basic Ethical Principles

The "**basic ethical principles**" refers to those general judgments that serve as a justification for particular ethical prescriptions and evaluations of human actions.

Three basic principles, among those generally accepted in our cultural tradition, are particularly relevant to the ethics of research involving human subjects: the principles of respect of persons, beneficence and justice.

1. Respect for Persons
2. Beneficence
3. Justice

- Saint Mary's College California

CYBER + ETHICS

Cyber ethics is a branch of computer technology behavior that defines the best practices that must be adopted by a user when he uses the computer system. In simple terms, cyber ethics refers to the basic ethics and etiquette that must be followed while using a computer system.

- **Cyber ethics aims at giving orientation about right and wrong, good and bad, related to cyber space.**
- **Cyber ethics apply and modify fundamental values and virtues to specific new challenges and situations arising from cyber technologies and cyber society.**
- **Cyber ethics includes almost all ethics domains: *values, virtues and norms.***

- Christoph Stückelberger,
Cyber Ethics 4.0 – Chapter 1. Cyber Society: Core values and virtues

VALUES FOR LEARNING AND LEARNING FOR VALUES OF EUROPEAN UNIVERSITY EDUCATION

Prof. DSc. Stoyan Denchev

This work was supported by the NSP SD program, which has received funding from the Ministry of Education and Science of the Republic of Bulgaria under the grant agreement no. Д01-74/19.05.2022.

I have the pleasure to serve at one of the most modern boutique European universities

Prof. Stoyan Denchev
President of ULSIT's General Assembly

In this presentation, the educational and scientific space within the European Union is introduced.

The focus of the presentation is the trends in education and the vision for the future of universities in Europe.

SOME FACTS

The Universities in Europe currently are around:

5500

Of these, the universities in the member states of the European Union are:

3200

SOME FACTS

There are 12 000 000 students currently. From them:

Bachelor's

Master's

PhD Candidates

Speaking of universities, we should always do that on the basis of the paradigmatic postulate that the University's aim is to train not only good professionals but good European citizens as well

THE MAIN GOALS

- Effective management of research and innovation;
- Shared interoperability of infrastructure and resources;
- Development of human capital;
- Open science and open access;

The main goal should target the following areas:

- Cooperation between academia and business and formation of entrepreneurial thinking;
- Strengthening the commitment of individuals and society to research and innovation;
- Mobility of scientists;
- Financial aspects.

THE SUB-GOALS

- Improving the governance of European universities
- Development of human capital through university education
- Supporting and presenting the cooperation between academia and business
- Fostering the commitment of universities to citizens and society
- Improving the skills for working in an open science environment
- Supporting and presenting the cooperation between academia and business

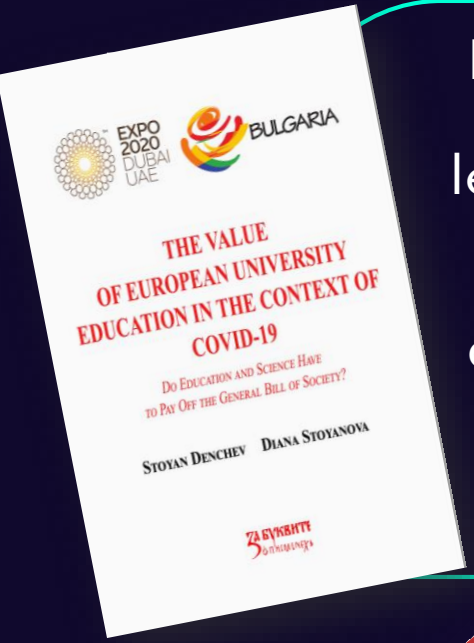

COOPERATING BETWEEN ACADEMIA AND BUSINESS AND FORMING AN ENTREPRENEURIAL MINDSET

ONLINE (SMART) EDUCATION

What does it mean?

If we extrapolate the total dominance of remote learning, we will soon have to delete the word "university" from the dictionaries and replace it with the term **"a supermarkets for selling diplomas".**

#LEARNINGBYDOING

The pursuit of excellence does not neglect the efforts for promoting broad access to university education, too, which can be achieved through:

01 Providing a unified environment for universities, students and research.

02 Reporting the discrepancy demand and supply of knowledge, which should be placed among the main priorities of the education system.

03 The successful new educational paradigm “Learning by Doing”, which will be a fundamental principle in the system of education.

04 Creating a flexible and lifelong learning oriented culture

05 Stimulating the development of centres of excellence.

THANK YOU!
